Site: 001

D-D FARM-ANIMAL SANCTUARY & RESCUE

Type: ROUTINE INSPECTION

Date: Apr-06-2015

3.125 (a) REPEAT

FACILITIES, GENERAL.

(a) Structural strength.

***On the north side of an enclosure housing a lion, there was a portion along the bottom of the enclosure, approximately 2 ft in length, where the wire fence was not securely attached to the ground with any support system. There was an approximately 1 1/4 inch space between the bottom of the fence and the ground. This unsecured section of fencing may not allow for the safe containment of the animals and could increase the risk of injury to the animals. Also, the licensee must ensure that all housing facilities are structurally sound and maintained in good repair to protect the animals from injury and to contain the animals at all times.

3.127 (d) REPEAT

FACILITIES, OUTDOOR.

(d) Perimeter fence.

***The perimeter fence measured less than 8 feet (96 inches) high on the east side of the facility which houses large felines and wolves. The licensee had put up high tensile wire along the top of the perimeter fence to add height since the fence was included on the 9/16/14 inspection report for insufficient height. However, on the east side of the facility, the fence measured 90 to 95 inches in height depending on the region of fence measured. The perimeter fence must be of sufficient height to keep animals and unauthorized persons out. The licensee must ensure that the perimeter fence is at least 8 feet high in order to protect the type of animals in the facility by restricting animals and unauthorized persons and having contact with the animals in the facility, and so that it can function as a secondary containment system for the animals in the facility at all times.
