

Vermont State Police: An Examination of Traffic Stop Data *July 1, 2010-December 31, 2015*

Background of the Study

The final report provides an extensive analysis of traffic enforcement practices by Vermont State Police for traffic stops that took place from July 1, 2010 to December 31, 2015. The report presents three separate analyses of racial and ethnic differences for each community:

1. A comparison of all stops by each VSP barrack with an estimated driving population for each community.
2. An analysis of the racial and ethnic differences in post stop outcome in issuing a citation versus a warning.
3. An analysis of racial and ethnic differences in searches conducted by VSP barracks.

Measuring Racial Disparities Using Driving Population Estimates

Driving Population Estimates (DPE)

- Limitations in Commonly Used DPEs
 - Census Data and Licensed Drivers Data
 - Do not account for differences in driving patterns among racial groups
 - Do not account for in- and out-migration of residents
 - Traffic and Violator Observations
 - Labor intensive and expensive
 - Ideal for local-level data analysis vs. state-level data analysis
- Using a Better DPE: Crash Data
 - A reliable measure of people who drive more, drive poorly, and drive to locations where stopping behavior by the police is high
 - Scholars show support for using not-at-fault drivers in two car crashes to represent driving population

Table 4. Demographic Characteristics of Residents and Drivers in Vermont

Race/Ethnicity	Vermont Residents	DPE	Traffic Stops
African American	0.9%	1.0%	2.0%
