Astronaut Audra
and Baehr
Explore the
Solar System.

By Baehr Fetty,
Age 6
Audra the Astronaut and I are in space. The ship is full of control buttons. I push one to let Audra out.

We both know a lot about space!
COMETS
Mercury is a tiny planet. It is hot in the day and cold at night.

Mars is a dusty, cold planet.
The water on earth contains so much life!

Venus’ surface is hot enough to melt metal.
Jupiter is a planet with a big red storm spot. It is a giant blob of gas!

Saturn has rings that are mostly made of ice.
Uranus is tilted onto its side. Its ring goes top to bottom, just like the planet.

Neptune is a blue, stormy, windy planet. It is very cold.
Constellations are also part of space. My favorites are: Big Dipper, Little Dipper, Cassiopeia, Orion, Gemini, Alpha Centauri, and Vela.

I also made one up: Ninja!
It’s time to go back home Audra.

The End.
