How to push content to the PMP from Core Publisher

The Core Publisher PMP Push feature will allow you to push your content to the PMP at the same time that your post is created in a streamlined manner. By pushing your content to the PMP, Public Media Platform, other member stations and PMP partners will be able to pull your content onto their sites. Learn more about the PMP here: http://publicmediaplatform.org/about/

This article will show you:

- How to enable the PMP Push feature In Core Publisher
- How to push a specific post to the PMP
- How to locate your posts in the PMP

How to enable the PMP Push feature in Core Publisher

To enable the PMP Push feature you **must already have** enabled the PMP within your site.

Note: If the PMP is not enabled on your Core Publisher site, you can not proceed. To enable the PMP follow the instructions here:

http://mediad.publicbroadcasting.net/p/newnprdsblog/files/201504 /how to pull content from the pmp into core publisher march 2015.pdf

To enable the PMP Push functionality you must first navigate to the "Get PMP Content" section.

- 1. Login to your Core Publisher site
- 2. Click "Configure Corepublisher" in the menu across the top of the screen
- 3. Select "Get PMP Content"

Once you have reached the Public Media Platform API administrative page, you can select the "Push Settings" tab

- 1. Under "Activate push" select the "Yes" button
- 2. Scroll to the bottom and click "Save Settings"

How To Push A Specific Post To The PMP

Now that you have enabled the push you can now begin pushing your Core Publisher content to the PMP.

After enabled, all users will now see the "Send to PMP" option on the post creation page. By default, this option is set to "Do not send" and it has to be selected by the user. See instructions below.
